

Noise adversely affects human health. Nowadays it is particularly difficult to avoid noise pollution. Megalopolis residents often suffer from diseases caused by excessive noise, such as heart diseases, headaches; the human nervous system is also affected. However, if an adult can do something to reduce the adverse exposure to excessive noise, small children born with deafness need help.

We want to help children with disabilities (deaf, hard of hearing, with severe speech impairment, with complex defects) and invite you to join us.

The Organizing Committee announces that part of the earnings will be used for purchasing the necessary equipment for the State Educational Institution Boarding School No.31 of Nevsky district of St. Petersburg.

The Boarding School No. 31 implements educational activities according to programmes of primary general and basic general education, adapted for students with disabilities (deaf, hard of hearing, with severe speech disorders, with complex defects).
